Claims 1, 4 and 5

The invention set forth in claims 1, 4 and 5 does not involve an inventive step in the light of documents 1 and 2. It would be easy for a person skilled in the art to use the constituent members of the roller-bearing unit having been de-magnetised in advance, which is disclosed in document 2, in the demagnetised roller-bearing unit with encoder, which is disclosed in document 1.

Claim 2

A roller-bearing unit with an encoder wherein the density of the magnetic flux of the magnetically-formed members that constitute the roller-bearing unit after demagnetisation is 0.5mT or less per unit and 2mT or less

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

when combined to form the roller-bearing unit is not disclosed in any of the documents cited in the international search report. Moreover, it is not obvious to a person skilled in the art.

Claim 3

The invention set forth in claim 3 does not involve an inventive step in the light of documents 1 to 3. It would be easy for a person skilled in the art to apply the feature set forth in document 3 wherein the density of the magnetic flux emitted from the detection surface of the encoder is 10mT or more to the roller-bearing unit with encoder.
